License notes

For using the software on a workstation a software license is required. If the software should be used on several workstations then additional software licenses are required for these workstations. There is no difference between first and additional licenses.

License model

All of our products are delivered as „floating licenses“, managed by a license server. Inside of the company network these licenses can be used on any number of workstations as long as the permitted number of existing licenses will not be exceeded.

Program protection, license exchange

All licenses of our solutions for PTC Creo Elements/Direct Modeling are managed with passwords for the official license server of PTC Elements/Direct. Replacing the hardware of the license server requires new passwords. The license exchange is made without any additional costs against handing over the old license which should be deactivated.

Buying licenses or rental licenses

Software licenses either can be purchased (see buying licenses) or be rented for a definite time period (see rental licenses / Subscription). In the price for the software rent the maintenance is already included (update authorization, support). For purchased licenses the maintenance contract must be ordered separately.

Updates without change of the main version

Updates inside of a main version, e.g. from version 5.0 to version 5.1 are possible without any license costs. Downloads are available from our web site.

Updates with change of the main version, maintenance

Updates with a change of the main version, e.g. from version 5.0 to 6.0 are only available with an active maintenance contract. A maintenance contract includes the right to use the newest software version (Updates) and additional phone, email and remote support for one year. If there will be no timely cancellation to the end of the time of validity the maintenance will be automatically renewed for more 12 months.

It is necessary to order maintenance together with the software. The later entry into maintenance is only possible with the Return-To-Support (RTS) regulation.

Updates without maintenance, Return-To-Support (RTS)

With the Return-to-Support (RTS) arrangement customers without an active maintenance contract have the possibility to enter subsequently into a maintenance contract. The RTS fee contains the re-entry into a maintenance contract and additionally a maintenance contract for the following year.
